ICE CREAM PRODUCTION

Ice cream production in the United States in June was estimated at 74,105,000 gallons, the Crop Reporting Board reports. This is 1 percent less than the enumeration of June 1969, but 1 percent more than in June 1968. Output through June this year was only slightly more than in the first half of 1969, but 1 percent less than in 1968. Seasonally, production gained 9 percent from May to June this year, compared with 10 percent at this time last year and 5 percent in 1968. Temperatures during June averaged normal or above in the area including most all of the West except eastern Arizona, New Mexico, northern Colorado and southeastern Wyoming and extending eastward to Lake Michigan. Temperatures were below normal in most of the remainder of the country except for Maine and important portions of Indiana, the Virginias and Maryland.

Compared with June 1969, ice cream production was unchanged in the East North Central Region, while it was down 2 percent in the South Atlantic and 7 percent in the North Atlantic. Increases in the other regions varied from 2 percent in both the West North Central and the South Central to 5 percent in the Pacific. Output was 3 percent more in the Mountain States. In the three leading producing states, production was up 4 percent in California, but was down 1 percent in Pennsylvania and 13 percent in New York.

Production gained from May to June in all regions. The advances ranged from 3 percent in the North Atlantic States to 15 percent in both the West North Central and the Mountain. In the South, output was up 6 percent in the South Central Region and 9 percent in the South Atlantic. The East North Central and the Pacific both showed gains of 13 percent. Production increased 10 percent in Pennsylvania and 8 percent in both New York and California. Seasonal increases occurred in all other important producing states except Massachusetts, New Jersey, Illinois, Kansas, Louisiana and Arizona.

Revised ice cream estimates, by states, for January-May 1970 are shown on page 5. Enumerated data for 1969, by states and months are available in the annual release "Production of Manufactured Dairy Products" which may be secured upon request to this office.

Production of ice milk in the United States in June, estimated at 32,065,000 gallons, was 3 percent more than in June last year, and 7 percent larger than in June two years ago. Cumulative output for the first half of 1970 was 2 percent more than in the similar period in 1969 and 8 percent greater than in 1968.

The seasonal gain from May to June this year was 12 percent, compared with 7 percent at this time last year and 13 percent two years ago. Increases occurred in all regions. Compared with June last year, increases occurred in both North Central Regions and the West while decreases were shown in the remaining regions.

SHERBET PRODUCTION

Production of sherbet in the United States in June, estimated at 5,725,000 gallons, was 4 percent less than in June last year, but was 1 percent more than in June 1968. Total output during the first six months of this year was 2 percent less than in the corresponding period last year, but 4 percent more than in the first half of 1968.

Seasonally, production increased 12 percent from May to June this year, compared with 14 percent between these months in 1969 and 16 percent in 1968. Increases occurred in all regions, and were sharp in all except the North Atlantic and the East North Central. Compared with June 1969, decreases in the North Atlantic, the South Atlantic, and the East North Central Regions outweighed increases in the other regions.

1/ Revised January-May.

Production of Mellorine and other frozen desserts made with fats and oils other than milkfat in June, estimated at 5,185,000 gallons, was down 7 percent from June last year and 10 percent from June two years ago. Output during the first six months of this year was 5 percent less than in the corresponding period in 1969 and 6 percent smaller than in 1968.

Seasonally, production gained 6 percent from May to June this year, compared with 6 percent also at this time last year, and 8 percent two years earlier. Production increased in all producing states except Illinois, where it decreased.

Compared with June 1969, increased production occurred in Oklahoma, Montana, and Oregon, while output held steady in Texas. All other producing states had decreases.
